NOTES ON HYDRAULICS

A standard grain cart requires three hydraulic remotes.

Optional Pendant Control manages slide gate, folding auger and adjustable spout and requires one hydraulic remote.

Additional 35 GPM minimum oil flow is required for hydraulic unloading drive.

New automatic PTO clutch with 50 hour greaseable bearings eliminates shear pins. Auto latch collar remains open allowing full hand use for connecting PTO. Collar stays open until collar is installed to full position on PTO shaft.

Hydraulic drive is optional (35 GPM minimum oil flow required)
