

Jolly Garden

Provisional Brochure

FALC

The new "JOLLYGARDEN" shredder with collector, rear hydraulic lifting trolley and 360° pivot wheels was designed to allow using this machines with tractors that are characterised by reduced power and weight.

The material is unloaded from about a 2-metre height, thus facilitating the material removal operations a lot. All models have a reliable and resistant structure, with an exclusive collection system that is capable of meeting the most demanding needs for cutting and collecting the debris. The "JOLLY GARDEN" rotor includes the "palette knives" to obtain a sharper and more uniform cutting of grasslands. For this reason, the "JOLLY GARDEN" machine was designed to be mainly used in pitches, public parks, as well as – within the agricultural sector – in greenhouses and vegetable cultivations to cut and collect the debris.
