# FOR ORCHARDS AND VINEYARDS...... BANDING KITS

## 225 MANUAL BANDING KIT

This unit has 2 control cables that operate independently with 2 separate levers.  This allows the operator to spread material to both sides at the same time or to one side or the other.  This is accomplished by control levers mounted beside the operator, as shown in picture below.

Also available, the Hydraulic Controlled 225 Banding Kit. This takes the work out of opening and closing…lets the cylinder do the work. Individual cables to each opening…disconnect one for one-sided spreading.  Precision openings fine for spreading granular chemicals as insecticides and herbicides.  Also available for 225 Banding Kit when mounted on 1200C, the 525 Dual Hydraulic Cylinders for INSTANT-ON…INSTANT-OFF control for right or left spreading. Both style Banding Kits are ideal for spreading fertilizer under fruit and nut trees, in vineyards, nurseries or any place where band spreading is desired.  The chutes are adjustable from 60 inches to 34 feet, with no center spread where not needed.  (On side spreads such as 34 ft., pattern width is approximately 6 ft., and on 60 inches, pattern width is approximately 18 inches.)

1200C w/225 Manual Banding Kit

### OTHER OPTIONS AVAILABLE

1200C w/Orchard Trailer, #269 w/Low Profile Wheels & Flotation tires.

#82 – Side-Pattern Kit (Manual Controlled)
