

Plant Tray & Plant Box Holders for Rotary One.

Different design tray holders for greenhouse grown plants.
Available for use with the Holland Rotary One Transplanter.

R-101 4 SIDED PYRAMID CAROUSAL TRAY HOLDER

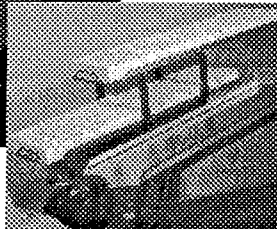

Simple spring loaded design holds STYROFOAM trays firmly in place for quick, easy removal of plants. Quickly rotate table 90 degrees to provide next full tray. Accepts standard 13 x 26 tray. Will allow planting 2 rows, 28" apart or wider. Entire unit slides over anchored shaft.

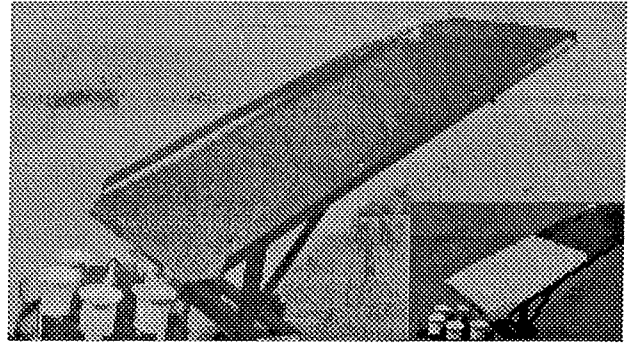

R-102 TWO SIDE MOUNT GALVANIZED METAL PANS

Each holds two standard 13 x 26 STYROFOAM plant trays. Pans are tilted on a 30 degree slope to provide easy, quick replacement of empty trays. For use when planting two rows 44" or wider. First trays slide down lengthwise on metal pan. Two more pans can be mounted on top of first set of pans to double your amount of plants available to you. This method of carrying 8 trays per row can help eliminate the problem of trays dropping off in the field, where they are so easily broken or damaged.

R-104 CENTER MOUNTED PLANT PAN

Single large galvanized pan holds four STYROFOAM trays of plants carried crosswise behind each other for quick, easy accessibility. Pan is on a 30 degree slope for easy slide down replacement of empty tray. Also resists plants falling out when turning around at the end of the row. Second tier available to double your plant carrying capacity or for carrying empty trays.

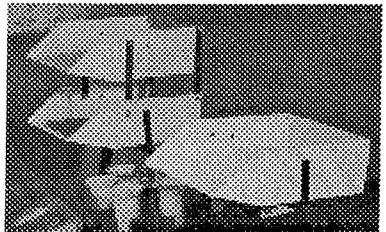

R-103 Plant Box Holders

A. Mount on both sides of the Rotary One transplanter. For use when planting plugs, or cells that have been removed from the tray they were grown in and shipped loose in cardboard cartons. Plants are easily placed in these metal plant boxes.

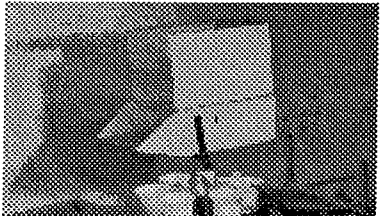

Two standard "bare root" transplanter plant boxes.

B. Second tier available to carry more plants for long rows. These metal plant boxes are the standard boxes used for several years. Top box bolts to bottom box. Push sides of bottom box in 1/2" for quick, easy removal from mounting stand.

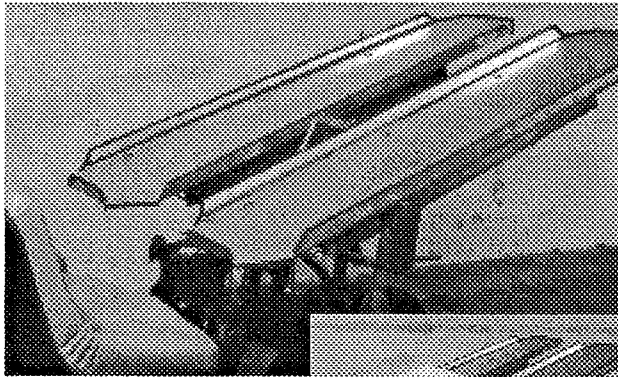

C. Jumbo plant boxes is another way to carry a large volume of plants with you in the fields. Jumbo plant box "snaps" in place on the mounting stand.

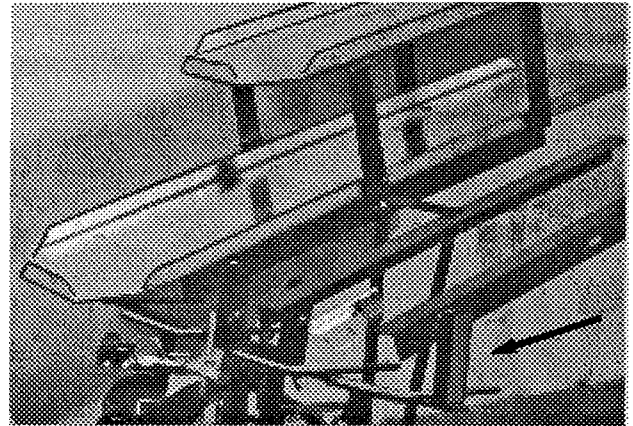

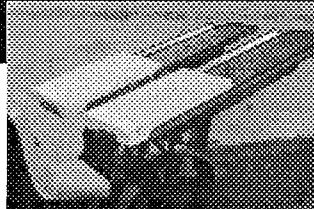

Plant Tray Holders for Holland's Bare Root Transplanter.

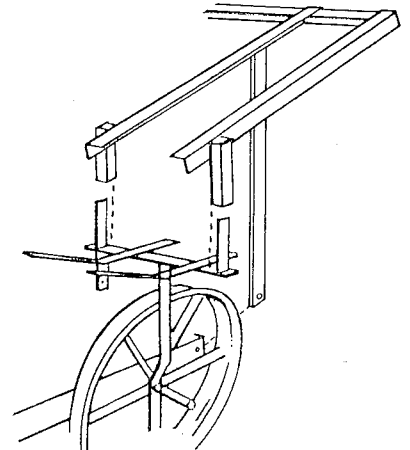

B102 TWIN GALVANIZED PANS

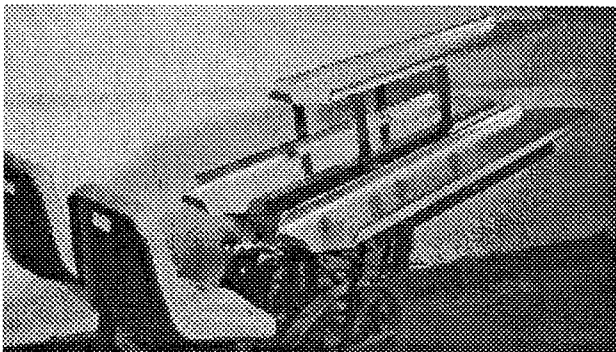

Two galvanized metal pans that hold 4 STYROFOAM plant trays. Complete with mounting brackets for clamping on plant box stand brackets. Fits all single, two and four row model bare root transplanters, 40" rows and wider. Two metal pans with mounting brackets and bolts for 1 unit.

Convert your present transplanter into handling the STYRO-FOAM plant trays so popular now. Holland's galvanized pans have a specially designed framing which will easily slide over most Bare Root planter box holders. Easily bolts to unit frame.

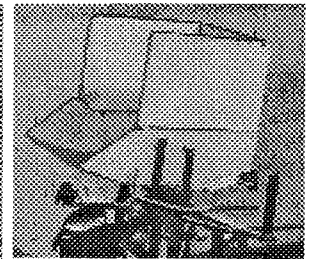

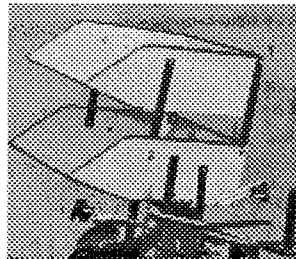

B102T DOUBLE TIER TWIN GALVANIZED PANS

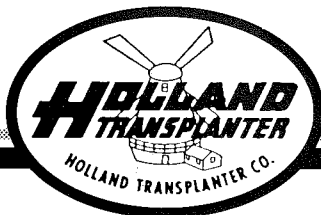

For more carrying capacities, add the twin tier pans which gives an additional four trays capacity. The quick and easy way to carry more plants, for those long rows. Two metal pans with brackets, for bolting on and above the main pair of pans.

STACKED PLANT BOXES AND JUMBO BOXES

Left photo shows two plant boxes stacked for extra carrying capacity. Right photo shows our Jumbo plant boxes for growers with those extra long rows. Both size boxes easily and quickly "snap" into place, with no tools needed.
